sonville.

The corrected reading of the barometer (reduced to sea level) at New York on Sunday. May 30, 1920, at 8 AM, as reported by the United States Weather Bureau, was thirty and twelve hundredths (30,12) inches. This closely approximates seven hundred and sixty-five (765) millimetres. Captains of all vessels now lying in or near the ports of New York and Brooklyu can advantageously use the above official data for observing whether their own barometers require any considerable correction or adjustment.

Wind at Sandy Hook, 8 PM, S, 12 miles; clear: light sea. At City Island at sunset, S, light bresze, clear; smooth sea.
